THE WORLD'S BEST
SOUND DEADENING SOLUTION

soundshield™

SOUNDSHIELDUSA.COM

TURN YOUR VEHICLE INTO A PREMIUM SOUND BOOTH

The purpose of any vehicle audio installation is to provide a premium listening experience with clear, crisp, and emphasized sound. The best way to achieve this is by including sound deadening as part of the installation process. That way you ensure the sound you want to hear in your vehicle stays within and the noise pollution of the road stays out.

Uniquely Designed with a focus on the dynamics of sound and behavior with vehicular acoustics

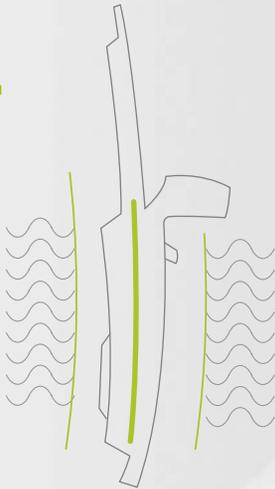

Materials that lead the industry in sound absorption for maximum efficiency

Waterproof, closed-cell foam to prevent swelling and mold make it great in any environment

WHAT MAKES SOUNDSHIELD DIFFERENT FROM THE OTHERS

Traditional sound deadening options tend to fall short by not approaching sound from various angles. Some are foil based, but lack the density of our butyl rubber. Others use open cell acoustic foam which allows for moisture absorption which can lead to mold and mildew issues. Adhesives that don't grip as strongly as ours can lead to install slips and gap formations. Our sheets are oversized so installations can be done cleaner with less seams and disruption in the sound waves.

SoundShield is proud to bear the coveted Mobile Solutions seal of certification.

INDUSTRY ICONS

SoundShield partners John Schwartz (left) of Perfectionist Auto Sound in Alaska and Bryan Schmitt (right) of Mobile Solutions in Arizona came together to make the next evolution in premium sound deadening possible.

These titans of the automotive aftermarket industry bring over 50 years combined experience in audio installation and solutions to meet the needs of installers.
